

What is claimed is:

- 1 1. A cooling fan, comprised of a fan body mounted on a base through a shaft
- 2 assembly, in said base, a depression having at least an upward and a sideward
- 3 opening being formed centrally in the primary portion, and said fan body being
- 4 extended from its circumferential surface outwardly to form a plurality of fan
- 5 leaves, an electrical device for driving the fan body being arranged in said base,
- 6 in which all the bottom edges of said fan leaves are fixedly jointed with a
- 7 common baseplate, which is also formed by extending the circumferential
- 8 surface of said fan body, without any clearance.
- 1 2. The cooling fan according to claim 1, in which each fan leaf is twisted by a
- 2 specific angle to form a curved face.
- 1 3. The cooling fan according to claim 1, in which each fan leaf forms a plane
- 2 having a specific deflection angle.
